

30-Day SaaS MVP Blueprint

Zumetrix Labs | Forge Clear Ideas Into Shipped Software

This is a temporary download file for the website lead flow.

Replace this PDF later with the final designed guide, keeping the same filename:

public/downloads/30-day-saas-mvp-blueprint.pdf

The working MVP rule

A useful MVP is not the smallest product. It is the smallest version that proves one real business decision.

Simple 30-day shape

Days 1-3: clarify the user, problem, promise, and what not to build yet.

Days 4-7: shape the journey, feature boundary, stack, and release plan.

Days 8-18: build the core flows with authentication, data, payments, or automation where needed.

Days 19-24: test with real scenarios, fix confusing moments, and prepare launch assets.

Days 25-30: deploy, observe usage, collect feedback, and decide the next release.

Before you build, answer these

1. Who is the first user?
2. What painful job are they trying to finish?
3. What must happen for them to say this is useful?
4. What can wait until version two?
5. What data, payment, or workflow risk could slow the launch?

Need help turning this into a clean release plan? Email hello@zumetrix.com.
